

PROFESSIONAL-GRADE PIPE INSPECTION CAMERA

Meet the new SEWERCAM ECO50, a professional-grade inspection camera engineered for plumbers and maintenance teams who demand quality, clarity, and performance without the premium price tag.

Built to thrive in the toughest conditions, the ECO50 features a 23 mm self-levelling camera head with bright LED illumination — perfect for navigating tight 90° bends, PVC and VCP junctions, and 100 mm sewer lines with ease.

The durable yet flexible pushrod has been carefully balanced for precision: supple enough to manoeuvre around tight bends, yet robust enough to reach extended distances without compromising control.

A large 10.1" HD LCD display delivers crystal clear visuals on site, making inspections faster, easier, and more accurate than ever.

Designed with the same engineering attention as our full-size systems, the ECO50 provides professional-level reliability in a portable, affordable package, making it an ideal choice for everyday drain and sewer inspections.

KEY FEATURES

- 23mm HD Sony self leveling camera head with Sonde
- 50m x tough 7mm pushrod
- Large 10.1" Touch screen
